

Amendments to the Specification

Please add the following new paragraph after Paragraph 0042:

-- [0042.1] As may be readily noticed from Figure 3, each GRO/portion is at a corresponding area on the IC. The areas are non-contiguous, implying that different GROs/portions measure the corresponding place/area of the IC. In particular, GROs 310-1, 310-2, 310-3 and 310-4 are respectively shown in top left, top right, bottom left and bottom right areas in the example scenario there. --
